

Workflow Automation

Penelope includes automated workflow technology to help your business run smoothly. Once configured, tasks and alerts can be sent automatically to staff to make sure nothing falls through the cracks.

Example, your organization has a new client. You need to make sure paper work is filled out, appointments are booked and so on. Penelope can automate that process while supervisors can monitor which tasks are completed or overdue.

That's just one example. Penelope includes many more for you to choose from.
